## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lu (2004/0111005) in view of Griffin et al(4,587,956); Hart (5,195,335), and Okinaka et al (4,067,783).

Lu teaches a device as claimed having a series of rod shaped magnets (-104,-112-), wherein the magnets connect together and are the only interconnecting means, see figures 3,4, 5, 6, in that each row of magnets and beads are interconnected to the next row, only by magnetic attraction. However, Lu does not teach ceramic magnets with a metal coating or the strength in gauss of the magnets. Griffen et al teach the use of ceramic magnets having a gauss rating of up to 6400 gauss, with the most effective therapeutic effect is achieved at 6400 gauss. It would have been obvious to one of ordinary skill in the art at the time the invention was made to use ceramic magnets having a gauss rating of 6400 gauss in place of the stone magnets taught by Lu in order to optimize the therapeutic effect of the device as taught by Griffen et al. Neither Lu nor Griffen et al teach a coating of metal on the magnets. Hart teaches a decorative necklace having magnetic elements, in which the magnetic elements are coated for enhancing the esthetic look of the necklace, column 2, lines 19-21, but does not teach a

metal coating. Okinaka et al. teaches gold coating jewelry to make esthetically appealing and less expensive, column 1 lines 17-24. It would have been obvious to one of ordinary skill in the arts at the time the invention was made to use gold electroplating to coat the magnets with gold of Lu to provide an economically advantageous esthetically appealing jewelry as taught by Hart and Okinaka et al.
